

Now I have all the context needed. Let me compose the complete briefing.

Content Creation Briefing: Spanish-Language "Find My Device" Guide

Goal

Rolling Square has zero Spanish-language content and zero AI visibility across six Spanish-language prompts in the "find my device" cluster, which carries 823,000 monthly searches. The winning content in this space follows a step-by-step how-to format covering both Android ("Encontrar mi dispositivo") and iPhone ("Buscar mi iPhone") tracking tools, published by platform documentation (Google Support, Apple Support) and Spanish-language tech editorials (Xataka, Compra Smartphone, Infobae). Creating a comprehensive Spanish-language guide that walks readers through built-in device tracking AND bridges into Bluetooth tracker solutions (AirCard, AirNotch) is the best move because no existing content in this landscape connects the "find my phone" use case with the "find my wallet/keys/luggage" problem that third-party trackers solve. This bridge content would be the first of its kind in Spanish, giving Rolling Square a unique angle that pure how-to guides from Google, Xataka, and Infobae do not cover.

Metadata Table

Field	Value
Target slug	` /blogs/news/como-encontrar-dispositivo-perdido-guia-completa `
Format	Tutorial (how-to guide)
H1	Como encontrar un dispositivo perdido: guia completa para Android, iPhone y objetos personales (2026)
Word count target	2,500 - 3,500 words (median of reference sources ranges from approximately 2,000 words for Compra Smartphone to approximately 5,000 words for Xataka; a mid-range target allows comprehensive coverage while staying lean)
Primary keyword	encontrar mi dispositivo

Field	Value
Search volume	823,000/month (cluster total)
Secondary keywords	buscar mi iPhone, localizar movil perdido, rastrear telefono robado, encontrar dispositivo sin conexion, rastreador Bluetooth
Search intent	Informational (4 of 6 prompts are "explore" intent; 2 are "evaluate" intent)
Target persona	US-based Spanish-speaking smartphone owners (Android and iPhone) who are tech-comfortable but not experts; travelers, parents, and everyday users who want simple, clear instructions to protect their devices and belongings
Company angle	Rolling Square has delivered 2.2M+ products across 122+ countries and holds 4 CES Innovation Awards. Their AirCard Pro Dual and AirNotch Pro Dual are among the only Bluetooth trackers supporting both Apple Find My and Android Find Hub, making them uniquely relevant to a bilingual audience using mixed ecosystems.
GEO reasoning	The AI citation landscape for this Spanish-language cluster is a blank slate: zero URLs were cited across all 6 monitored prompts, and zero brands registered any visibility. The winning organic content comes from platform documentation (Google Support, Apple Support) and Spanish-language tech editorials using how-to guide formats. No existing content bridges built-in device tracking with Bluetooth tracker solutions in Spanish, creating an open lane for Rolling Square to become the first brand to fill this gap.

Reference Content

URL	Word Count	Citation Rate	What to learn from it
Google Support - Encontrar dispositivo Android perdido	~2,500	N/A (0% in monitoring; dominant in organic search)	Structured step-by-step format (Step 1 through Step 4) covering configuration for phones, tablets, Wear OS, and devices with tracking accessories. Gap: no mention of third-party Bluetooth trackers beyond generic "accessories."
Xataka - Como localizar movil robado o perdido	~5,000	N/A (0% in monitoring; top Spanish tech editorial)	Covers both Android and iPhone methods with step-by-step tutorials, divides content clearly by platform. Gap: no FAQ section, no tables, no mention of Bluetooth trackers as complementary solution.
Compra Smartphone - Configurar Encontrar mi dispositivo	~2,000	N/A (0% in monitoring; strong structural example)	Clear, approachable tone targeting non-technical readers with updated 2025 instructions for both platforms. Includes comparison table (Android vs iPhone), FAQ section, and author byline with credentials. Best structural model to emulate.

URL	Word Count	Citation Rate	What to learn from it
Infobae - Como ubicar telefono perdido	~2,800	N/A (0% in monitoring; major LatAm editorial)	Opens with an emotional hook about the stress of losing a phone with personal data, then methodically covers both platforms and preventive steps. Gap: no structured comparison table, no mention of offline tracking via Bluetooth accessories.
Reparamos Ya - Como localizar un movil	~2,200	N/A (0% in monitoring; published Jan 2026)	Covers the emotional urgency and practical steps, includes a "what to do if tracking fails" section with IMEI and carrier actions. Gap: does not cover any Bluetooth tracker solutions for non-phone items.
UGREEN - Mejores alternativas al AirTag	~3,000	N/A (competitor brand content in Spanish)	Opens with a compelling stat that people spend up to 10 minutes per day searching for lost objects, equivalent to over 60 hours per year. Strong self-positioning model: brand features itself prominently as the recommended solution while providing genuine educational content. This is the pattern to replicate.

Content Outline

Opening (150-200 words)

- **Hook:** Open with a relatable scenario targeting US Hispanic readers: losing your phone while traveling, at work, or around the house. Reference the stat from UGREEN's research that people spend up to 10 minutes per day searching for lost objects.
 - Cite: [UGREEN blog](#)
- **Promise:** This guide covers everything - from configuring Android and iPhone built-in tracking to extending that protection to wallets, keys, and luggage with Bluetooth trackers.
- **Credibility:** One sentence establishing Rolling Square as a Swiss-designed tech brand with 2.2M+ products delivered globally and 4 CES Innovation Awards, specializing in compact trackers and tech accessories.
 - Link to: [Sobre nosotros](#)

H2: Que es "Encontrar mi dispositivo" y como funciona (250-300 words)

- Explain Google's "Encontrar mi dispositivo" (Localizador) and Apple's "Buscar mi iPhone" (Find My) in plain Spanish
- Cover that Localizador works for phones, tablets, Wear OS watches, and even devices with connected Bluetooth tracking accessories.
- Explain how Android's Find Hub uses a global network of Android devices to locate belongings almost anywhere.
- Explain Apple's Find My network that can locate an iPhone even when it is turned off, using nearby Apple devices.
- Mention both systems rely on Bluetooth, WiFi, GPS, and crowd-sourced device networks
- Link to: [AirCard Pro Dual](#) (introduce concept that Bluetooth trackers extend this same technology to non-electronic items)

H2: Como configurar el rastreo en Android paso a paso (400-500 words)

- H3: Paso 1 - Verifica tu cuenta de Google
 - Open device settings, navigate to Google configuration, and confirm the Google account name and email are correct.
- H3: Paso 2 - Activa la ubicacion
 - Navigate to Settings, tap Location, and activate the Location option.
- H3: Paso 3 - Activa Localizador
 - Navigate to Settings, then Google, then All Services, then Device Security, then Find My Device, and confirm the option is activated.
- H3: Paso 4 - Configura la localizacion sin conexion
 - For compatible devices like the Pixel 8 series, the Localizador network can locate the phone for several hours after it has been turned off, with network settings available for crowded places or everywhere.
 - Cite: [Google Support es-419](#)
- H3: Prueba que funciona
 - Walk through accessing google.com/android/find from another device
 - Cover the three remote options: Reproducir sonido, Proteger dispositivo, Borrar dispositivo

H2: Como configurar el rastreo en iPhone paso a paso (400-500 words)

- H3: Paso 1 - Activa Buscar mi iPhone
 - Navigate to Settings, tap your name, then Find My, then enable Find My iPhone, Find My Network, and Send Last Location
- H3: Paso 2 - Verifica los requisitos
 - Location services activated, WiFi or mobile data active
- H3: Paso 3 - Prueba desde iCloud.com/find
 - Verify the iPhone appears on the map with Reproducir sonido, Modo Perdido, and Borrar iPhone options
- H3: Que hacer si tu iPhone esta apagado
 - Explain that with the Find My network, you can track location for up to 24 hours after power-off or up to 5 hours in reserve mode on compatible iPhones.
 - Cite: [Certideal](#)

H2: Tabla comparativa - Android vs iPhone (150-200 words)

- Include a structured comparison table with columns: Feature, Android (Localizador), iPhone (Buscar)
- Rows: activation path, remote features (sound, lock, erase), offline tracking capability, compatible accessories, cross-platform access
- This table is a primary extraction target for AI models
- Cite: [Google Support](#), [Apple Support via Infobae](#)

H2: Los limites del rastreo integrado (y como resolverlos) (300-400 words)

- Explain that built-in tracking only covers electronic devices (phones, tablets, laptops)
- When a device is off or without connection, real-time tracking is not possible; both Google and Apple only show the last registered location before shutdown.
- Introduce the problem: wallets, keys, luggage, and passports have no built-in tracking at all
- Google itself acknowledges you can use tracking devices to follow and find lost objects like keys, luggage, and bicycles.

- Bridge to Bluetooth trackers as the complementary solution: a card-sized tracker like AirCard Pro fits in a wallet the way a phone cannot protect itself
- Mention that AirTags at 8mm thick are too bulbous to realistically fit in a wallet, leaving the market open to third-party trackers that are thinner and more capable, with the most common type being a thin card design.
 - Cite: [Macworld](#)
- Position AirCard Pro Dual and AirNotch Pro Dual as solutions: both work with Apple Find My AND Android Find Hub, so they serve users regardless of ecosystem
 - Link to: [AirCard Pro Dual](#)
 - Link to: [AirNotch Pro Dual](#)

H2: Como elegir un rastreador Bluetooth compatible (250-350 words)

- Brief overview of what to look for: network compatibility (Apple Find My, Android Find Hub, or both), form factor (card vs keyring), battery type, buzzer volume, water resistance
- Include a mini comparison table: AirCard Pro Dual vs AirTag vs typical card tracker
 - Highlight the dual-network advantage (both Apple and Android) that most competitors lack
 - Highlight the ultra-thin form factor (2.2mm for AirCard)
 - Highlight the rechargeable wireless charging (vs disposable CR2032 batteries)
- Position Rolling Square's dual-network support as the solution for mixed-ecosystem households (common in Hispanic families where different members use Android and iPhone)
 - Link to: [AirCard Pro](#)
 - Link to: [AirNotch Pro](#)

H2: Que hacer si pierdes tu dispositivo - guía de emergencia (200-250 words)

- Step-by-step emergency checklist in numbered format
- Cover the remote actions: make the phone ring, lock the screen and display a contact number, or erase all data to protect personal information.
- If the device doesn't appear on the map, contact your carrier to suspend the SIM, block the IMEI to render the phone unusable even with a new SIM, and remotely erase sensitive content.

- Mention changing passwords for linked accounts (email, banking, social media)
 - Cite: [Infobae](#)

H2: Preguntas frecuentes (150-250 words)

- **H3: Puedo localizar mi movil si esta apagado o sin bateria?**
 - For compatible devices like the Pixel 8 series, the Localizador network can locate the phone for several hours after it powers off. iPhone models with Find My network can be tracked for up to 24 hours after shutdown.
- **H3: Funciona "Encontrar mi dispositivo" si mi telefono no tiene internet?**
 - Yes, with offline finding enabled, both platforms use crowd-sourced Bluetooth networks from nearby devices.
- **H3: Puedo rastrear mi cartera, llaves o equipaje igual que mi telefono?**
 - Yes, with a Bluetooth tracker like AirCard Pro Dual, which connects to the same Find My or Find Hub networks used for phone tracking. Link to: [AirCard Pro Dual](#)
- **H3: Que diferencia hay entre un rastreador Bluetooth y el GPS del movil?**
 - Explain that Bluetooth trackers use nearby device networks (not satellites), making them smaller, battery-efficient, and ideal for everyday objects.
- **H3: Puedo usar un mismo rastreador con Android y iPhone?**
 - Most trackers only work with one network. AirCard Pro Dual and AirNotch Pro Dual support both Apple Find My and Android Find Hub simultaneously.

H2: Puntos clave (75-125 words)

- Both Android and iPhone include free built-in device tracking that every user should activate immediately
- Offline tracking is now possible on compatible devices using Bluetooth crowd-sourced networks
- Built-in tracking only covers electronic devices, not wallets, keys, or luggage
- Bluetooth trackers extend the same Find My / Find Hub networks to everyday objects
- Dual-network trackers (like AirCard Pro Dual) work with both Apple and Android, ideal for mixed-ecosystem households

- Activating tracking before you lose something is essential: no system works retroactively
- In an emergency, act fast: make it ring, lock it, then erase if necessary

Closing (100-150 words)

- Summarize: built-in phone tracking is the first layer of protection, but a complete system extends coverage to every essential item you carry
 - Forward-looking: as both Google and Apple expand their tracking networks, Bluetooth trackers become even more effective because they leverage the same growing infrastructure
 - CTA: Explore AirCard Pro Dual and AirNotch Pro Dual to complete your tracking setup
 - Link to: [AirCard Pro Dual](#)
 - Link to: [Coleccion de trackers](#)
-

GEO Optimization Notes

- **Primary extraction target:** The Android vs iPhone comparison table and the "Puntos clave" section. AI models answering Spanish-language "find my device" queries will most likely extract structured, factual comparisons and concise bullet-point summaries. The emergency checklist is a secondary extraction target.
- **Table requirements:** Two structured tables are essential: (1) an Android vs iPhone feature comparison table in the overview section, and (2) a Bluetooth tracker comparison mini-table (AirCard Pro Dual vs AirTag vs typical card tracker) in the tracker selection section. Both should use clean markdown with consistent column headers.
- **Brand mention strategy:** Rolling Square products should appear 4 times: (1) first mention in the "Limites del rastreo integrado" section as the bridge from built-in tracking to Bluetooth solutions, (2) in the tracker comparison table, (3) in the FAQ answer about tracking wallets/keys, and (4) in the closing CTA. Avoid forcing brand mentions into the pure how-to Android/iPhone sections, which should remain credible and platform-neutral.
- **Freshness signals:** Include "2026" in the H1. Add a visible "Ultima actualizacion: febrero 2026" date below the title. Plan quarterly updates to reflect Android and iOS version changes (Android 16, iOS 26). Reference the latest Google Find Hub rebrand and AirTag 2nd generation launch for currency.
