

Now let me do web research to verify the current state of the key editorial targets and gather details for the briefing:Now let me search for Rolling Square's current editorial coverage and specific info about their TAU product and any existing press mentions:Now let me search for the TechRadar editorial contacts and review submission processes:Now I have all the data I need. Let me compile the comprehensive editorial briefing.

Editorial Outreach Briefing: Portable Charger Cluster

1. Goal

Rolling Square has zero AI visibility and zero citations across all 6 prompts in the "portable charger" cluster, a high-volume topic with 110,000 monthly searches. The AI citation landscape for this cluster is overwhelmingly dominated by editorial review content from major tech publications. TechRadar tests portable batteries for more than just charging speeds, putting them through durability testing and all features, and only recommends battery packs they've tested thoroughly. CNN Underscored puts nearly a dozen of the top battery packs through a series of intensive tests. Rolling Square's own blog content (roughly 400 words of generic checklist copy) lacks the testing depth, structured comparisons, and third-party credibility that AI engines prioritize. Owned content alone cannot win this cluster because AI engines overwhelmingly favor independent, lab-tested, expert-bylined roundups over brand-authored product pages. Rolling Square's credibility for editorial inclusion is strong: the brand holds 4 CES Innovation Awards, 3 Red Dot Design Awards, 10 patented products, and 650,000+ customers, and its TAU keyring power bank occupies a genuinely unique niche that no major competitor has replicated.

2. Metadata Table

Field	Value
Cluster topic	Portable charger
Target queries	"best portable chargers for fast charging," "portable chargers with wireless charging," "compare power bank models with quick charge and USB-C," "recommend a durable portable charger for

Field	Value
	international travel," "high-capacity portable chargers to charge multiple devices," "what to consider when buying a new portable phone charger"
Primary persona	Tech-conscious consumers evaluating portable charging options: travelers, digital nomads, gadget enthusiasts, and everyday smartphone users who read review sites before purchasing. They care about charging speed, portability, durability, and value.
Editorial citation share	Estimated 85-95% of AI citations in this cluster come from editorial/media sources (based on web research; monitoring data returned zero structured citations, indicating a "dark cluster" where citations were not captured)
Top editorial competitor	TechRadar's "The best power banks 2025: top portable chargers" (techradar.com/news/top-portable-chargers) - comprehensive lab-tested listicle with expert byline, updated regularly, covering 10+ products with detailed specs tables
Brand's current editorial coverage	Rolling Square TAU/TAU 2 has been reviewed by niche/mid-tier outlets: Macworld, Android Police, The Gadgeteer, Pack Hacker, Gadget Flow, AppleInsider, Brad's Backpack. Absent from top-tier "best portable charger" roundups (TechRadar, CNN Underscored, Engadget, Consumer Reports, GearJunkie). Sentiment is positive across all existing reviews.
GEO opportunity	Top editorial roundups in this cluster are updated annually or more frequently. Every major publication uses lab-tested listicle format with 8-15+ products, specs tables, pros/cons, and named expert authors. Inclusion in even one top-tier roundup could generate AI citations across multiple prompts.
Article types cited	Expert-tested roundups/listicles (dominant), individual product reviews, buyer's guides, comparison features
Publisher tier mix	Approximately 60% major media (TechRadar, CNN Underscored, Engadget, Consumer Reports), 25% niche/outdoor (GearJunkie, Pack Hacker), 15% affiliate/comparison (BGR, Gizmochina)
Why Rolling Square	The TAU keyring power bank is the only product in its category, occupying a "world's smallest power bank" niche with patented design, magnetic charging dock, and built-in connectors. Swiss design heritage, 4 CES Innovation Awards, and 2.2M+ products delivered give the brand credible proof points that editorial reviewers value.
Existing overlap	Own URLs touching this cluster: rollingsquare.com/products/tau-2-a-new-kind-of-power-bank, rollingsquare.com/products/power-bank-10000-mah, rollingsquare.com/products/power-bank-5000-mah, rollingsquare.com/products/power-bank-20000-mah, rollingsquare.com/blogs/news/packing-essentials-a-checklist-for-the-best-portable-charger-to-carry. Existing editorial coverage of TAU 2 from Macworld (Dec 2025), Android Police (Nov 2024), Pack Hacker (Oct 2025), Gadget Flow (Oct 2023), AppleInsider (Feb 2022).
News hooks available	TAU 2 as a unique product category pitch ("world's smallest keyring power bank"), CES Innovation Award history (brand regularly exhibits at CES), Essential power bank line available for review units, Swiss design + Italian heritage story, 650,000+ community milestone, potential TAU 3 or new product launch timing

3. Editorial Landscape

Cited Editorial Content

URL	Publisher	Article Type	Estimated AI Relevance	What Makes It Citeable	Brand Influence
techradar.com/news/top-portable-chargers	TechRadar	Expert-tested listicle	Very High	Lab testing with durability checks, named expert author (Philip Berne), regularly updated, 10+ products with detailed specs, structured comparison	Miscellaneous, Tech Authority, Established link, authoritative
cnn.com/cnn-underscored/reviews/best-portable-charger	CNN Underscored	Expert-tested listicle	Very High	In-house testing with charging speed measurements (30-min benchmarks), named author (Henry T. Casey), structured picks by use case, updated for 2026	Miscellaneous, no specific brand, Round Square products
engadget.com/computing/accessories/best-power-bank-143048526.html	Engadget	Expert-tested listicle	Very High	Multi-year testing history, scenario-based picks (phone, laptop, MagSafe, rugged), structured specs per product, updated 2026	Miscellaneous, no specific brand, Round Square products
consumerreports.org/.../best-portable-chargers	Consumer Reports	Lab-tested ratings	High	Independent lab testing for charge speed, recharge speed, ease of use, and portability; structured ratings database	Miscellaneous, Round Square, not tested
gearjunkie.com/technology/best-power-bank	GearJunkie	Expert-tested listicle	High	Outdoor/adventure angle, named authors, field testing	Miscellaneous, no specific brand, Round Square

Publisher Profiles

TechRadar (techradar.com)

- **Audience:** TechRadar is an online technology publication owned by Future plc, with editorial teams in the United States, United Kingdom, and Australia. Reaches millions of global tech consumers researching purchases.
- **Publishing model:** TechRadar uses company loan programs for products they review, and they return products at the end of the agreed loan period. The publication maintains independent editorial standards. If you're representing a brand, TechRadar is not interested in editorial pitches - they instead suggest emailing an interview opportunity with staff of the product you represent.
- **Editorial cycle:** Power bank roundup appears to update every few months to annually, with deal-related spin-off articles published more frequently. The main roundup carries a "2025" dateline with recent updates referencing 2026 content.
- **How they select products:** TechRadar only recommends battery packs they've tested thoroughly. Products must be commercially available. They require sending review units on loan.
- **Brand's existing relationship:** No prior TechRadar coverage of Rolling Square power banks found. Rolling Square has been covered by TechRadar's sister publication Tom's Guide for other products (cables/trackers), which creates a warm lead through Future PLC's editorial network.

CNN Underscored (cnn.com/cnn-underscored)

- **Audience:** CNN's mass-market consumer audience shopping for vetted product recommendations. High trust signal from the CNN brand.
- **Publishing model:** All products are independently selected and reviewed by CNN Underscored editors, and they may earn a commission through affiliate links. Earned editorial model - they accept products for testing but editorial decisions are independent.
- **Editorial cycle:** The "best portable chargers" guide is updated regularly (currently dated 2026), with standalone reviews and CES coverage providing additional touchpoints throughout the year.
- **How they select products:** CNN Underscored tests products and their writer notes "the world of portable chargers is increasingly confusing, filled with vaguely-named products sold by companies you may have never heard of." This suggests openness to lesser-known brands that offer genuinely differentiated products.
- **Brand's existing relationship:** No prior CNN Underscored coverage of Rolling Square found. Henry T. Casey is the primary electronics writer covering portable chargers.

4. Outreach Targets

Target 1: CNN Underscored

Field	Value
Publisher	CNN Underscored (cnn.com/cnn-underscored)
Target URL(s)	Primary: cnn.com/cnn-underscored/reviews/best-portable-charger (main roundup, updated 2026). Secondary: standalone TAU 2 review opportunity
Why this outlet matters	CNN Underscored's portable charger guide is a high-authority listicle with detailed lab testing data. CNN's brand trust gives it strong AI citation weight. The reviewer (Henry T. Casey) actively tests dozens of products and expresses genuine enthusiasm for novel form factors and problem-solving designs.
Power dynamic	Rolling Square likely has moderate leverage here. The TAU's unique form factor (keyring power bank with magnetic dock) is genuinely novel, and CNN Underscored's reviewer has demonstrated enthusiasm for innovative portable chargers. However, the brand is unknown to this outlet, so the pitch must lead with the product's novelty rather than brand recognition. The TAU would likely be positioned as a "niche pick" rather than a main recommendation given its 2,000 mAh capacity.

Field	Value
Likely access model	Affiliate/review - CNN Underscored typically reviews products independently after receiving review units, earning commissions on resulting purchases
Approach	Pitch Henry T. Casey directly via email. Reference his specific portable charger testing methodology (the 30-minute charging benchmark) and position the TAU 2 as a genuinely new category he hasn't tested: a keyring emergency power bank. Best timing: pitch between major roundup updates (spring/summer refresh cycle).
What to provide	TAU 2 review unit + Essential 10K mAh review unit (to give him two products to test), brand fact sheet with CES/Red Dot awards, structured specs comparison table, and the brand story angle (Swiss design, crowdfunding origins, 650K+ community)

Power dynamic assessment: The brand likely has moderate leverage because the TAU 2 represents a genuinely unique product category that CNN Underscored has not covered. CNN Underscored's reviewer has shown enthusiasm for portable charger innovation, noting that "the best products solve actual problems." Rolling Square's TAU fits this editorial lens. However, CNN Underscored typically holds editorial control over inclusion in their main roundup, and the TAU's 2,000 mAh capacity may position it as a specialty pick rather than a core recommendation.

Target 2: TechRadar

Field	Value
Publisher	TechRadar (techradar.com)
Target URL(s)	Primary: techradar.com/news/top-portable-chargers (main roundup). Secondary: standalone review opportunity for TAU 2
Why this outlet matters	TechRadar's power bank roundup is likely one of the most-cited editorial pages in this cluster. The publication has enormous organic reach, high domain authority, and a rigorous testing methodology that AI engines trust.
Power dynamic	The brand likely faces a steeper challenge here. TechRadar's power bank roundup currently focuses on mainstream 5,000-20,000+ mAh products with fast charging (30-145W). The TAU's 2,000 mAh emergency niche is outside their typical testing parameters. However, TechRadar does cover niche accessories and has a "5 best phone accessories of CES 2026" format that could serve as an entry point.
Likely access model	Earned editorial - TechRadar accepts product loans for independent testing and returns them afterward

Field	Value
Approach	Effective pitching to TechRadar starts with targeted outreach to relevant writers who cover the product category. Identify the staff writer covering the power bank roundup (currently Philip Berne) and pitch the TAU 2 as a unique "keyring power bank" category alongside an Essential power bank for the main roundup. Contact via news@techradar.com or identify the writer's direct contact through TechRadar's contact page. Best timing: ahead of their next roundup refresh.
What to provide	TAU 2 + Essential 10K/20K mAh review units on loan, structured specs sheet matching TechRadar's comparison format (capacity, max output, ports, weight, dimensions, price), brand fact sheet emphasizing awards and patent portfolio

Power dynamic assessment: TechRadar typically holds strong editorial control over which products appear in their roundups. While they often use company loan programs, they won't pull punches if the device isn't good enough for their readers. Rolling Square's Essential line needs to compete on specs against Anker, INIU, and UGreen - a tough field. The TAU 2 has a better shot as a novel "niche pick," but the brand should not assume inclusion is guaranteed. Sending both TAU 2 and an Essential power bank gives the reviewer options.

5. Pitch Toolkit

Asset	What to include	Status
Brand fact sheet	1-pager: Swiss design heritage, 4 CES Innovation Awards, 3 Red Dot Design Awards, 10 patented products, 650,000+ lifehackers, 2.2M+ products delivered, 164,000+ crowdfunding backers, B2B clients (Google, Intel, Microsoft, IBM). Focus on innovation credibility, not marketing superlatives.	Needs creation - raw data exists across rollingsquare.com and more.rollingsquare.com, but no journalist-ready 1-pager identified
Product information	TAU 2: 2,000 mAh, USB-C + patented Lightning/Micro USB connector, magnetic charging dock, keyring form factor, 50g weight, smaller than AirPods Pro case, average 30% phone battery boost, NFC digital business card, \$39.90. Essential line: 5K/10K/20K mAh options, 20W USB-C PD output, USB-A QC 3.0 18W. Format as a table row that drops into each publisher's existing comparison template.	Ready (product pages exist) but needs reformatting into structured press-kit format with specs tables matching editorial standards
Data/research	Original data Rolling Square can offer exclusively: (1) Usage data on TAU charging patterns from their customer base (how often users rely on emergency charging, most common scenarios). (2) Survey of their 650K+ community on portable charging habits. (3) Comparative size/weight data showing TAU vs.	Needs creation - this is the most valuable asset for editorial outreach. Publishers value exclusive data they cannot get elsewhere.

Asset	What to include	Status
	AirPods Pro case, vs. standard 5K mAh bank. If no original data exists, compile from customer reviews and support interactions.	
News hooks	(1) "World's smallest keyring power bank" unique category angle. (2) CES attendance history and any upcoming product launches (TAU 3, new Essential line, etc.). (3) Milestone: 650K+ lifehackers community. (4) Potential angle: "emergency preparedness" trend in portable charging (aligns with GearJunkie's outdoor positioning and CNN Underscored's emergency prep content).	Partially ready - brand has strong proof points but needs to package them as timely news angles tied to editorial cycles
Expert availability	Rolling Square co-founders (the two brothers from the brand story) can serve as expert sources on ultra-compact design engineering, Swiss design philosophy, and the problem-solution approach to product development. Format: available for email quotes, phone/video interviews, or CES/trade show meetups.	Ready - founders are active and the brand voice is authentic, but team should prepare 3-5 quotable soundbites on portable charging trends
Visual assets	High-resolution product photography of TAU 2 (product shots, lifestyle shots on keyring, size comparison vs. AirPods Pro case), Essential line product shots, Rolling Square logo in publisher-ready formats (PNG, SVG). Ensure all images are press-kit quality (white background options + lifestyle contexts).	Likely ready (product pages have good imagery) but verify resolution meets editorial standards (minimum 2000px wide) and provide a downloadable press kit folder
Case studies	1-2 customer stories relevant to portable charging: (1) A traveler or digital nomad who relies on the TAU for emergency situations. (2) A corporate client case (Google, Intel) using Rolling Square products as team gifts, demonstrating enterprise credibility. Pull from Trustpilot reviews and community stories.	Needs creation - customer quotes exist across review sites and product pages but need to be packaged into structured case studies with permission

6. Outreach Email

Target: CNN Underscored - Henry T. Casey (Electronics Writer)

Subject line: Review unit: keyring power bank you haven't tested yet (2,000 mAh, fits on your keys)

Body:

Hi Henry,

I saw your latest update to the CNN Underscored portable charger guide, and your note about how "the world of portable chargers is increasingly confusing" resonated with our team. We're Rolling Square, a Swiss design company behind the TAU 2 - an emergency power bank that lives on your keyring. It's smaller than an AirPods Pro case, weighs 50 grams, and includes built-in USB-C and Lightning connectors so you never need a cable.

We'd like to send you a TAU 2 for independent testing. It won't compete with the Anker Nano on capacity (it's 2,000 mAh, designed for emergency top-ups), but it solves a different problem: it's always with you because it's on your keys, and it recharges automatically on its magnetic dock. We've delivered 2.2 million products across 122 countries, won 4 CES Innovation Awards, and hold 10 patents on our designs. We can also send our Essential 10,000 mAh power bank if you'd like to test a more traditional option alongside it.

Happy to ship review units whenever works for your testing schedule. No strings - just looking for an honest evaluation.

Best, [Name] Rolling Square SA

Personalization notes:

- Replace [Name] with the actual PR/marketing contact
- Before sending, check Henry T. Casey's most recent portable charger content to reference a specific product or test result that connects to the TAU's niche
- If targeting TechRadar instead, adjust the subject line to reference their power bank roundup specifically and address the relevant staff writer (Philip Berne for the power bank roundup)
- For GearJunkie, emphasize the outdoor/emergency use case and the TAU's durability during field testing
- Include a link to the press kit (once created) rather than attachments

7. GEO Optimization Notes

These instructions are for the Rolling Square team to maximize the likelihood that any editorial coverage of TAU 2 or Essential power banks is structured for AI extraction and citation.

1. **Provide structured specs in publisher-ready format.** When sending product information to any reviewer, format specs as a table row matching that publisher's existing format. For CNN Underscored, include: capacity (mAh), maximum output (W), ports, included cable (yes/type), number of charges for iPhone 16, charge time benchmarks. CNN Underscored measures how much charge is refueled after 30 minutes from dead - provide your own 30-minute benchmark data so reviewers can easily compare.
2. **Supply specific, extractable claims rather than marketing language.** Give publishers precise data points: "2,000 mAh capacity delivers an average 30% battery boost to modern smartphones" rather than "enough power for emergencies." Rolling Square tested smartphones from major processor producers, showing small-battery phones gained up to 54%, mid-battery phones up to 35%, and large-battery phones up to 28%. These specific numbers are what AI engines extract and cite.
3. **Suggest a concise product positioning sentence.** Provide reviewers with a factual 2-3 sentence description optimized for AI extraction: "The Rolling Square TAU 2 is a 2,000 mAh emergency keyring power bank designed in Switzerland. It weighs 50g, includes built-in USB-C and Lightning connectors, and recharges automatically via a magnetic dock. It delivers an average 30% battery boost, enough for emergency calls, GPS navigation, or mobile payments." If a publisher uses this language, AI engines are more likely to cite it.
4. **Request feature tagging on comparison articles.** If the TAU 2 is included in a roundup, ask the editorial team to tag it with features like "keyring," "ultra-compact," "emergency," "built-in cables," "magnetic charging" - terms that match how users query AI engines about portable chargers. AI engines match feature tags to user queries when assembling comparison answers.
5. **Collaborate on freshness by offering update support.** Engadget's reviewer has spent years testing dozens of batteries. GearJunkie's team scoured the market for innovative models and put them through extensive testing. These roundups refresh periodically - offer to provide updated products (e.g., if a TAU 3 launches) proactively before the refresh window. Being responsive during update cycles increases the chance of improved positioning.
6. **Structure the press kit for extraction.** Format the press kit so key claims appear in bullet-point or table format. Include a comparison table showing TAU 2 vs. competing ultra-compact power banks (Aqua Vault ChargeCard, Vapcell P2150A, CukTech 10) with columns for weight, dimensions, capacity, price, and unique features. Android Police noted that "none of these offerings have the premium design, are lightweight, and have the extended versatility of Rolling Square's second-generation keychain power bank." Journalists who receive structured materials reproduce that structure in articles, improving AI citability.

8. Monitoring Plan

Metrics Table

Metric	Current Baseline	90-Day Target	Source
Editorial mentions (portable charger cluster)	5-7 mid-tier reviews (Macworld, Android Police, Pack Hacker, Gadget Flow, AppleInsider, The Gadgeteer, Brad's Backpack)	+2-3 new mentions, including at least 1 top-tier outlet	Web search / media monitoring
AI citations from editorial content	0 (zero citations across all 6 prompts)	1+ citation in at least one AI-generated answer	Cluster re-analysis
Brand inclusion in target articles	0 out of 5 top-tier roundups	Outreach sent to 2 primary targets, 1+ positive response	Manual check of CNN Underscored and TechRadar roundup URLs
Outreach response rate	N/A (no prior outreach)	30-50% response rate on 3-5 targeted pitches	PR/marketing team tracking
Referral traffic from editorial	0 (estimated, from top-tier roundups)	Baseline established from any new coverage	Web analytics
Coverage sentiment	Positive (all existing reviews are favorable)	Maintain positive sentiment	Media monitoring

Ongoing Actions

- **Publications to watch:**
 - CNN Underscored "best portable chargers" (cnn.com/cnn-underscored/reviews/best-portable-charger) - check monthly for updates and new product additions
 - TechRadar power bank roundup (techradar.com/news/top-portable-chargers) - check monthly for refresh signals
 - Engadget "best power banks" (engadget.com/computing/accessories/best-power-bank-143048526.html) - check monthly
 - GearJunkie "best power banks" (gearjunkie.com/technology/best-power-bank) - check quarterly; best pitched before spring/summer outdoor season

- Consumer Reports portable charger ratings - check for new testing cycles (last update was September 2025)
- **Journalists and editors to maintain:** After initial outreach, follow Henry T. Casey (CNN Underscored), Philip Berne (TechRadar), and the Engadget accessories reviewer. Share relevant Rolling Square news proactively. Build the relationship beyond a single pitch by offering expert commentary on portable charging trends.
- **New publication opportunities:** Monitor for new "best keyring power bank," "best emergency portable charger," "best EDC charger," and "best ultracompact power bank" articles appearing in AI citations. These niche roundups are the most natural fit for the TAU 2 and represent lower-competition opportunities.
- **Content refresh triggers:**
 - Rolling Square launches TAU 3 or a major update to the Essential line: re-pitch all outlets with updated product
 - A target roundup is updated without including Rolling Square after outreach: follow up with a gentle reminder
 - Rolling Square wins another CES Innovation Award or design award: leverage as a news hook for re-outreach
 - Brand crosses a community milestone (e.g., 700K lifehackers): use as a news angle
- **Competitive monitoring:** Track when Anker, INIU, Baseus, UGreen, or Nimble gain or lose positions in the target roundups. Anker's power bank is currently TechRadar's top pick for a compact all-in-one charger. If Anker or others stumble (product recalls, spec downgrades, availability issues), that creates an opening to pitch Rolling Square as an alternative. Also monitor for new entrants in the ultra-compact/keyring power bank niche.
- **Escalation triggers:**
 - A competitor launches a keyring-sized power bank (direct TAU competitor): requires immediate differentiation messaging
 - Negative editorial coverage of Rolling Square: respond promptly with corrective information
 - A target roundup is updated and a previous Rolling Square mention is removed: investigate and re-engage
 - Sudden increase in AI citations for a new publication not on the target list: evaluate and add to outreach plan
