

Now let me research the top editorial targets to understand their publishing models and check for any existing Rolling Square coverage:Now let me look at the top cited editorial URLs to understand their structure and check if Rolling Square is included:Now let me search for Rolling Square's existing coverage in the major target publications:Excellent - now I have a comprehensive picture. Macworld has reviewed Rolling Square's TAU 2 power bank and inCharge XL cable, plus featured the Supertiny in a deals article. Let me check one more thing - whether the brand exists in the TechRadar best iPhone charger article specifically:Now I have everything I need. Let me compile the full briefing.

Editorial Outreach Briefing: iPhone Charger Cluster

1. Goal

Rolling Square has 0% visibility and zero citations across all 6 AI prompts in the "iPhone charger" cluster, a topic with 90,500 monthly search volume. Editorial sources account for 54.5% of all AI citations in this cluster, with major tech review sites (Digital Camera World, CNET, Macworld, Tom's Guide, The Verge, TechRadar) dominating through expert-tested "best of" listicles that AI engines trust for consumer purchase decisions. The brands that earn AI mentions - Apple (83.3% visibility), Anker (63.3%), Belkin (33.3%) - succeed not through their own content but by being recommended within these independent reviews. Rolling Square's Supertiny GaN charger, TAU power bank, and EDGE wireless charger are directly relevant products with genuine differentiation (4 CES Innovation Awards, 3 Red Dot Design Awards, patented ultra-compact designs), and the brand already has some editorial relationships with Macworld and Cult of Mac. The path to AI visibility runs through getting these products featured in the specific roundup articles that AI engines cite.

2. Metadata Table

Field	Value
Cluster topic	iPhone charger

Field	Value
Target queries	"best portable power banks for iPhone," "best compact GaN travel chargers for iPhone," "best fast charger for iPhone 16 Pro Max," "best iPhone chargers under \$30," "best MagSafe chargers," "compact durable iPhone charger international travel," "best multi-device charging solution compatible with iPhone"
Primary persona	Tech-savvy iPhone owner evaluating charger options: values portability, fast charging speeds, expert validation, and value for money. Reads review sites before purchasing accessories.
Editorial citation share	54.5% of all AI citations in this cluster come from editorial/media sources (36 citations across 23 URLs)
Top editorial competitor	Digital Camera World's "Best iPhone Power Bank" guide - 8 total citations, cited in 2 AI answers, averaging 4.0 citations per answer when used
Brand's current editorial coverage	Macworld has published standalone reviews of the Rolling Square inCharge XL cable and TAU 2 power bank, calling the TAU 2 "a great and affordable back-up battery" that is "smaller than an AirPods case." Macworld also featured the Supertiny in a deals article, noting it was "almost spooky how small" it is "for a full-bodied 65W charger." Cult of Mac published a hands-on Supertiny review, concluding "I put the claims to the test and came away impressed." Charge-Test (niche site) also reviewed it positively: "The Rollingsquare Supertiny left a surprisingly strong impression." However, none of these reviews appear in the current AI citation data for this cluster. The brand is absent from TechRadar, Tom's Guide, CNET, and Digital Camera World roundup articles.
GEO opportunity	36 editorial citations across 23 URLs, top editorial content averages 1.0-5.0 citations per AI answer, dominant article types are "best of" listicles with hands-on testing. Getting included in even 2-3 of the top-cited roundups could yield measurable AI visibility.
Article types cited	Buyer's guide listicles (dominant), hands-on reviews, product comparisons, news/deal coverage
Publisher tier mix	Major tech media (Tom's Guide, CNET, The Verge, TechRadar, Macworld): ~60% of editorial citations. Niche/specialty (Digital Camera World, T3, Pack Hacker, Android Authority, How-To Geek): ~30%. Affiliate/comparison sites: ~10%.
Why Rolling Square	The Supertiny is positioned as "the world's smallest 65W GaN charger," backed by 4 CES Innovation Awards, 3 Red Dot Design Awards, and 10 patents. The brand has 650,000+ customers across 122+ countries and existing media relationships with 71+ outlets. Its ultra-compact, Swiss-designed products fill a genuine niche (travel-friendly, design-forward charging) that major roundups currently under-represent.
Existing overlap	Rolling Square has blog content about the Supertiny (<code>/blogs/news/why-the-supertiny-is-the-charger-you-need</code>) and packing checklists (<code>/blogs/news/packing-essentials-a-checklist-for-the-best-portable-charger-to-carry</code>), but neither earns AI citations. The brand has product collection pages for GaN chargers, wireless chargers, and power banks.
News hooks available	The Supertiny launched on Amazon (B0F9Q1RJ1N) and is gaining traction. The brand recently refreshed multiple product lines (TAU 2, AirCard Pro, Essential GaN Charger). CES participation history and award-winning status provide ongoing editorial hooks. New product launches or updated models for the current iPhone generation would create strong timely angles.

3. Editorial Landscape

Cited Editorial Content

Publisher Profiles

TechRadar (techradar.com)

- Audience:** Millions of monthly visitors globally, primarily tech-enthusiastic consumers researching purchases. Strong US and UK readership.
- Publishing model:** The reviewer states "I've served as a resident Reviews Writer at TechRadar for more than a year and a half" and "I've tried out more than 25 chargers." Appears to operate on earned editorial with affiliate revenue. Commonly accepts review units for hands-on testing.
- Editorial cycle:** Major roundups appear to update quarterly to semi-annually. The "best iPhone chargers" guide was last updated November 2025 and is likely due for a refresh in early-mid 2026.

- **How they select products:** Products are "selected based on a few key factors, including charging performance, design, and value for money. Every option has to excel in all three departments to make the cut." Requires hands-on testing of physical products.
- **Brand's existing relationship:** No prior Rolling Square coverage found on TechRadar. Cold outreach required.

Macworld (macworld.com)

- **Audience:** Apple-focused consumers and professionals. Strong authority in the Apple ecosystem.
- **Publishing model:** Earned editorial with affiliate links. Commonly accepts review units. Also operates a deals shop (shop.macworld.com) that currently lists Rolling Square inCharge X products.
- **Editorial cycle:** Roundups update frequently to match Apple product releases. The MagSafe battery pack roundup is current as of early 2026.
- **How they select products:** Led by Simon Jary, former Editor of Macworld with "over 30 years of expert experience." Hands-on testing with specific charging speed measurements and capacity tests.
- **Brand's existing relationship: Warm.** Macworld reviewed the TAU 2, noting it is "smaller than an AirPods case but hosts a 2000mAh battery pack." Also reviewed the inCharge XL ("might be all you need"). Featured the Supertiny in a promotional deals article. Simon Jary is a known contact for Rolling Square product reviews.

4. Outreach Targets

Target 1: TechRadar - "Best iPhone Chargers" Guide

Field	Value
Publisher	TechRadar (techradar.com)
Target URL(s)	https://www.techradar.com/best/best-iphone-chargers (buyer's guide, currently earning AI citations) and https://www.techradar.com/news/top-portable-chargers (power bank roundup, 1 citation)

Field	Value
Why this outlet matters	TechRadar is a tier-1 tech publication with high AI trust signals. Its iPhone charger guide emphasizes hands-on testing credibility, a hallmark of content AI engines prefer to cite. The power bank roundup also earns citations. Combined, these two articles represent addressable citation opportunities across multiple AI prompt types in this cluster.
Power dynamic	TechRadar likely holds editorial control over inclusion. Rolling Square is not a household name in the same category as Anker or Belkin, so the brand will need to lead with genuine product differentiation (smallest 65W GaN charger claim) and award credentials to earn consideration. The Supertiny's unique compact form factor fills a niche (ultra-compact travel charger) that may be underrepresented in TechRadar's current lineup.
Likely access model	Affiliate/review - TechRadar appears to accept review units for independent evaluation. The site uses affiliate links. Providing product access with no editorial strings attached is the expected approach.
Approach	Identify the reviews writer (Harry Padoan, based on byline) via LinkedIn or editorial email. Pitch the Supertiny as a review candidate for the "best compact/travel" slot in the iPhone charger guide. Best timing: pitch 2-4 weeks before anticipated guide refresh (likely Q1/Q2 2026). Provide review unit + press kit.
What to provide	Review unit (Supertiny US plug version), brand fact sheet with CES/Red Dot award credentials, comparison data sheet showing size vs. Anker Nano and Apple 70W adapter, high-res product images

Target 2: Macworld - MagSafe Battery Pack Roundup & iPhone Charger Coverage

Field	Value
Publisher	Macworld (macworld.com)
Target URL(s)	https://www.macworld.com/article/668978/best-magsafe-portable-battery-packs-and-power-banks-for-iphone-12-and-13.html (5 AI citations, 5.0 avg when used) and https://www.macworld.com/article/668980/best-magsafe-chargers.html (top MagSafe charger roundup)
Why this outlet matters	Macworld's MagSafe power bank roundup earns 5 citations at a 5.0 average per AI answer - the highest citation density of any editorial URL in this cluster. Macworld is an established Apple-ecosystem authority that AI engines heavily trust.
Power dynamic	The brand likely has moderate leverage here because Macworld already has a warm editorial relationship with Rolling Square. Simon Jary has reviewed multiple Rolling Square products positively and knows the brand. This makes inclusion in roundup articles a natural extension of existing coverage.

Field	Value
Likely access model	Earned editorial / affiliate review - Macworld has already accepted and independently reviewed Rolling Square products. The existing relationship suggests continued willingness to evaluate new products.
Approach	Reach out to Simon Jary directly (he authored both the TAU 2 review and the MagSafe roundup). Reference the existing TAU 2 review as context. Pitch for inclusion of: (1) TAU 2 in the MagSafe portable battery roundup as an "emergency/keyring" pick, and (2) Supertiny in the iPhone charger roundup or a standalone GaN charger review. Timing: the MagSafe roundup was updated as recently as 2 weeks ago, so the next refresh window is likely in 1-2 months.
What to provide	Updated TAU 2 spec sheet with iPhone 16/17 compatibility confirmed, Supertiny review unit if not already provided, structured comparison data (size, weight, wattage) vs. competing products in the roundup

5. Pitch Toolkit

Asset	What to include	Status
Brand fact sheet	1-pager: Rolling Square overview, Swiss design heritage, 650,000+ customers, 2.2M+ products delivered, 4 CES Innovation Awards, 3 Red Dot Design Awards, 10 patents, 71+ media features, B2B clients (Google, Intel, Microsoft)	Needs creation - compile from existing press page at more.rollingsquare.com/press.html
Product information	Supertiny: 65W GaN, 1.7in long, 1.37in wide, 70g, PD 3.0/PPS, foldable US/UK/EU plug, ribbed thermal design. TAU 2: 2000mAh keyring power bank, USB-C + Lightning + Micro-USB, 49g. GaN 65W: 2x USB-C + 1x USB-A, aluminum shell. Include comparison table vs. Anker Nano, Apple 20W/70W adapters, UGREEN Nexode. Price points: Supertiny \$49.99, TAU 2 \$39.90.	Partially ready - product pages exist, but need to be reformatted into a structured comparison table optimized for editorial insertion
Data/research	Compile: (1) Size comparison data - Supertiny vs. every 65W charger on the market (volume in cubic inches), (2) Charging speed test results (28W to iPhone 16, 35W to iPad Pro, per Cult of Mac testing), (3) Efficiency data from Charge-Test: "Measured efficiency ranged between 85.7% and 91.1%." (4) Customer satisfaction data from Trustpilot (2,100+ reviews). If possible, commission or compile original data on GaN charger size-to-power ratios across the market.	Needs creation - third-party test data exists but needs to be consolidated into a press-ready format

Asset	What to include	Status
News hooks	Amazon launch of Supertiny (BOF9Q1RJ1N), any upcoming product refreshes or new launches, CES 2027 preview (if applicable), milestone announcements (e.g., units sold, new awards). If a new iPhone model launches, prepare a "compatible charger" angle immediately.	Needs creation - identify the strongest near-term hook
Expert availability	Company founders (the two brothers from the origin story) for quotes on design philosophy, GaN technology, compact charging innovation. For a more technical angle, identify an engineer or product lead who can speak to thermal management and efficiency.	Ready (founders available) - needs a named spokesperson with credentials formatted for press
Visual assets	High-resolution product photography (Supertiny next to common objects for scale - AirPods case, thumb, coin), comparison infographic (Supertiny vs. Apple 70W adapter showing 23% size difference), lifestyle travel photography, product logos in SVG/PNG for editorial use	Partially ready - product images exist on site, but editorial-specific assets (comparison shots, infographics) need creation
Case studies	Not directly applicable for consumer product reviews, but consider: (1) Customer testimonial roundup from Trustpilot highlighting iPhone charging use cases, (2) Travel blogger/creator testimonials using Supertiny on international trips	Needs creation

6. Outreach Email

Target: TechRadar - Harry Padoan (Reviews Writer, iPhone Chargers Guide)

Subject line: Review unit: Supertiny 65W GaN charger (smallest in its class) for your iPhone charger guide

Body:

Hi Harry,

I came across your iPhone charger guide on TechRadar where you mentioned testing more than 25 models. I work with Rolling Square, a Swiss accessory brand, and wanted to offer a review unit of the Supertiny - a 65W USB-C GaN charger that measures 1.7 inches long and weighs 70 grams.

For context on the size claim: independent testing by Charge-Test confirmed it is the most compact charger in the 60-65W range currently available. In real-world tests, it delivered 28W to an iPhone 16 Plus (the device's maximum) and 57-60W under sustained load. It retails at \$49.99 with foldable US, UK, or EU prongs. The product has earned CES Innovation and Red Dot Design Awards.

Happy to send a US-plug review unit along with a spec sheet and size comparison data if it is a fit for your testing lineup. No strings attached - just looking for an independent evaluation.

Best, [Name] [Rolling Square PR/Marketing contact]

Personalization notes:

- Customize the writer's name based on the current byline (verify before sending)
- Reference a specific product currently in the guide to show familiarity ("I noticed the guide currently features [X] in the compact category")
- If the guide was recently updated, acknowledge the timing: "I know the guide was just updated in November, but wanted to get on your radar for the next refresh"
- For Macworld outreach to Simon Jary, reference his TAU 2 review by name and pivot to the Supertiny and roundup inclusion

7. GEO Optimization Notes

When preparing materials for editorial outreach, structure everything to maximize the likelihood that published content gets cited by AI engines:

1. **Provide structured comparison data to publishers.** Include a ready-to-use comparison table row: Product name, wattage, dimensions, weight, ports, price, key differentiator. The top-cited articles in this cluster (Digital Camera World, CNET, Macworld) all use structured product entries with specs, pros/cons, and ratings. If Rolling Square's data arrives pre-formatted to match the publisher's existing table structure, it reduces editorial friction and increases the chance of accurate representation.
2. **Supply specific, extractable claims.** Lead with precise data points: "1.7 inches long," "70 grams," "65W GaN," "23% smaller than Apple's 70W adapter," "85.7-91.1% measured efficiency," "4 CES Innovation Awards." AI engines extract specific numbers and comparisons. Avoid vague positioning like "ultra-compact" without the measurement to back it up.

- 3. **Suggest a brand positioning sentence.** Provide a 2-3 sentence description optimized for AI extraction: "The Rolling Square Supertiny is a 65W USB-C GaN wall charger measuring just 1.7 inches long and weighing 70 grams, making it the smallest charger in its wattage class. It supports PD 3.0 and PPS for fast charging of iPhones, iPads, and MacBooks, with foldable plug prongs and a ribbed thermal design. Designed in Switzerland, it retails for \$49.99." If a publisher uses language close to this, AI engines are more likely to surface it in answers.
- 4. **Request category tagging in roundups.** When a publisher includes Rolling Square in a roundup, suggest category tags that match the queries AI engines use: "best compact travel charger," "best GaN charger for iPhone," "smallest 65W charger." The query fanout data shows AI engines search for "best compact GaN travel chargers for iPhone" and "best compact iPhone chargers under \$30" - products tagged with these terms are more discoverable.
- 5. **Collaborate on freshness signals.** Offer to provide updated compatibility information whenever Apple releases new iPhone models (e.g., iPhone 17 series). Many of the top-cited roundups in this cluster include year-specific freshness markers ("2025," "2026") in their titles and content. Being responsive during these update cycles - proactively sending updated charging speed data for new devices - increases the chance of continued inclusion.
- 6. **Optimize the press kit for extraction.** Format the press kit with key claims in bullet-point and table format, not buried in paragraphs. Structure: one product per page, specs table at top, 3-5 bullet-point differentiators, comparison table vs. key competitors (Anker Nano II, Apple 20W, UGREEN Nexode Mini 30W), awards list. Journalists who receive well-structured materials tend to reproduce that structure in their articles.

8. Monitoring Plan

Metrics Table

Metric	Current Baseline	90-Day Target	Source
Editorial mentions (this cluster)	4 publications (Macworld, Cult of Mac, Pack Hacker, Charge-Test) - none in top-cited roundups	+2 new roundup inclusions (target: TechRadar + one of CNET/Digital Camera World)	Web search / media monitoring
AI citations from editorial content	0 citations for Rolling Square	1+ citations in at least 1 AI answer for the cluster	Re-run cluster monitoring
Brand inclusion in target articles	0 of 8 top-cited editorial articles include Rolling Square	2+ of 8 target articles include the brand	Manual check of target URLs

25/02/2026, 17:51

sitefire - Marketing suite for the agentic web

Metric	Current Baseline	90-Day Target	Source
Outreach response rate	N/A (new effort)	30-50% response rate on targeted pitches	PR/marketing team tracking
Referral traffic from editorial	Baseline from existing Macworld/Cult of Mac reviews	+25% increase in referral traffic from editorial domains	Web analytics
Coverage sentiment	Positive (existing reviews are all favorable)	Maintain positive sentiment across new coverage	Media monitoring

Ongoing Actions

- **Publications to watch:** TechRadar's "Best iPhone Chargers" guide (last updated Nov 2025 - next refresh likely Q1/Q2 2026). Macworld's MagSafe battery roundup (last updated Feb 2026 - set reminder for next refresh in ~2 months). Digital Camera World's "Best iPhone Power Bank" guide (highest citation volume). CNET's power bank roundup.
- **Journalists and editors to maintain:** Simon Jary (Macworld) - existing warm contact, builds on TAU 2 and inCharge XL reviews. Harry Padoan (TechRadar) - target for first contact. Ed Hardy (Cult of Mac) - existing reviewer, could provide introduction to other Future plc titles.
- **New publication opportunities:** Monitor for new editorial content appearing in AI citations that the brand is missing from. Watch for Engadget, How-To Geek, and Android Authority roundups that may enter the citation pool as they publish updated guides.
- **Content refresh triggers:** (1) Apple announces new iPhone models - immediately pitch updated Supertiny/TAU 2 compatibility data. (2) Rolling Square launches a new charger or power bank - pitch as a roundup addition. (3) A target roundup article is updated without including Rolling Square - re-pitch with fresh angle. (4) Brand crosses a milestone (e.g., 1M Supertinys sold) - pitch as a data point.
- **Competitive monitoring:** Track when Anker, Belkin, Ugreen, or INIU gain new editorial features. When a competitor launches a product in Rolling Square's size/portability niche, immediately pitch comparison data showing Supertiny's advantages. Monitor for any new entrants claiming "smallest charger" positioning.
- **Escalation triggers:** (1) A competitor receives a dedicated feature in a top-cited publication that Rolling Square was pitched to - reassess approach and angle. (2) A target article is updated and a previously included product is removed - indicates editorial openness to swapping products. (3) Negative coverage of Rolling Square appears (unlikely given current sentiment, but monitor). (4) AI citation landscape shifts significantly in this cluster (e.g., a new publication enters the top 5 cited).
