

Outreach Email — TechRadar (Cold)

Status: Cold pitch — no prior relationship. **Target:** TechRadar Reviews Writer covering iPhone chargers. **Confirmed byline:** Harry Padoan (verify on the live page before sending — bylines rotate). **Target article:** <https://www.techradar.com/best/best-iphone-chargers> (last updated November 2025) **Best timing:** 2-4 weeks before anticipated guide refresh — likely Q1/Q2 2026.

Subject line options (A/B)

A. Review unit: Supertiny 65W GaN — smallest charger we've measured for your iPhone guide

B. For the next refresh of your iPhone charger guide — Supertiny 65W (smallest in class)

C. Smaller than your Apple 20W, same power as your Apple 70W — review unit available

Recommended: Option A. Specific, names the publication's article, leads with a measurable claim.

Email body

Hi Harry,

I came across your "Best iPhone Chargers" guide on TechRadar — the methodology of personally testing 25+ models is exactly the kind of hands-on benchmark that's hard to find in this category. Quick note: your "best for travel" slot looked like a natural fit for what I'm about to mention.

I work with Rolling Square, a Swiss accessory brand. Our Supertiny 65W USB-C GaN charger has a measurable size claim that I think is worth a slot in the guide:

- 45 mm tall, 70 g — roughly 22 % smaller by volume than the Anker Nano II 65W, and 67 % smaller than Apple's 70W adapter.
- Same 65W output. Full PD 3.0 + PPS. Hits iPhone 16's 28W max and sustains 57–60W under MacBook load.
- Foldable prongs, sold in US/UK/EU plug variants — the only 65W GaN we know of with regional plug interchangeability.
- Independent measurement by Charge-Test: 85.7–91.1 % efficiency.
- CES Innovation Award + Red Dot Design Award. Designed in Switzerland. \$49.99 retail.

ROLLINGSQUARE · PR Kit · April 2026

Cult of Mac and Macworld have already independently reviewed the

Supertiny – happy to share those for context.

If it fits the next refresh, I can send a US-plug review unit along with the Charge-Test report and a comparison spec sheet. No strings, no embargo – just a unit for your testing rig.

Best,

[Name]

[Role] · Rolling Square

[Email] · [Phone]

P.S. We also make a 2,000 mAh keyring power bank (TAU 2) that fits into the "emergency / never forget it" niche – happy to include one if it fits your power bank guide too. Macworld already reviewed it and called it "smaller than an AirPods case."

Personalization checklist (before sending)

- [] Verify the writer's name on the current live byline (`techradar.com/best/best-iphone-chargers`). Bylines change between refreshes.
- [] Reference one product currently in the guide by name in line 2 — shows you read it. Example replacement for the opening: *"I noticed your guide currently features the [Product X] in the compact category — wanted to put a similar-class option on your radar."*
- [] Update the timing line if the guide's "last updated" date has shifted recently.
- [] If TechRadar's parent (Future plc) has covered Rolling Square elsewhere recently, mention it briefly.
- [] Use a real signature with PR contact info, not [Name] placeholders.

What to attach / link

1. `02-supertiny-spec-sheet.md` — convert to PDF before attaching.
2. `03-comparison-table.md` — convert to PDF.
3. `assets/supertiny-size-comparison.png` — drop inline in the email if HTML, or attach.
4. **Charge-Test report** — link or PDF.
5. **Macworld + Cult of Mac review URLs** — paste as plain links.

Follow-up cadence

- **Day 0:** Send email.
- **Day 7:** If no response, send a 3-line follow-up referencing one new data point (e.g., "Just saw the Anker Prime 67W get added — happy to send the Supertiny side-by-side").

ROLLINGSQUARE · PR Kit · April 2026

- **Day 21:** If still no response, switch channel — LinkedIn DM or Twitter/X reply on a relevant post.
- **Day 60:** Move to monitoring — re-pitch when the guide gets its next visible refresh.

Success signals to watch for

1. Reply asking for a review unit → ship within 48 hours.
2. Reply asking for spec clarification → respond within 4 hours, BCC PR for tracking.
3. Auto-reply / out-of-office → wait, then resend with same subject + "[gentle bump]".
4. Email bounce → find current writer via the live byline.

What success looks like (90 days)

- ☒ Supertiny added to the "Best iPhone Chargers" guide on TechRadar with at least the Pattern 2 description language (see `04-brand-positioning-ai-optimized.md`).
- ☒ At least one extractable comparison statement that AI engines can cite.
- ☒ Affiliate link to rollingsquare.com or Amazon.

Failure modes & responses

Outcome	Response
"We don't accept review units from new brands."	Offer a no-obligation purchase + reimbursement if they prefer.
"Not a fit for the current lineup."	Ask if there's a different guide (travel chargers, GaN comparison) it might fit.
"We need a paid placement."	Politely decline; this kit is for earned editorial only.
Silence after 60 days	Move on to alternative outlets (CNET, Digital Camera World, T3) using the same kit.
