

PR Kit — iPhone Charger Cluster

Date assembled: 29 April 2026 **Cluster:** "best iPhone charger" — 90,500 monthly searches
Strategic objective: Get Rolling Square products included in the editorial articles that AI engines (ChatGPT, Perplexity, Google AI Overview, Gemini) cite when answering iPhone charger queries.
Why this matters: 54.5 % of all AI citations in this cluster come from editorial sources. Rolling Square currently has 0 % visibility in those answers. Editorial inclusion is the highest-leverage GEO move for this category — far higher impact than producing more on-site content.

How to use this kit

- The kit is structured for **one PR/marketing person to send two outreach emails** in under an hour, with all supporting assets pre-built. Workflow:
- Read** 01-brand-fact-sheet.md and 02-supertiny-spec-sheet.md end-to-end. These are the source of truth for every claim in the kit.
 - Convert** 01 , 02 , and 03 to PDF (any markdown→PDF tool — Pandoc, Marked, or just print-to-PDF from your browser).
 - Pull** the assets/supertiny-size-comparison.jpg for inline use in emails or as an attachment.
 - Personalize** 05-email-techradar-padoan.md and 06-email-macworld-jary.md against the live bylines on the target articles. Send.
 - Track** outcomes against the metrics defined in this README.

Files

#	File	Purpose	Send to journalist?
01	01-brand-fact-sheet.md	One-page brand overview with awards, numbers, products	Yes (PDF attachment)
02	02-supertiny-spec-sheet.md	Full Supertiny editorial spec sheet with independent test data	Yes (PDF attachment)
03	03-comparison-table.md	Side-by-side specs vs Anker Nano II, UGREEN Nexode, Apple 70W	Yes (PDF attachment)
04	04-brand-positioning-ai-optimized.md	5 ready-to-paste descriptions optimized for AI extraction	No — internal reference for editor conversations

#	File	Purpose	Send to journalist?
05	05-email-techradar-padoan.md	TechRadar cold pitch (Harry Padoan)	Email body
06	06-email-macworld-jary.md	Macworld warm follow-up (Simon Jary)	Email body
—	assets/supertiny-size-comparison.jpg	True-scale visual comparison + headline numbers	Yes (inline / attachment)

Priority order

If only one email gets sent this week: **start with Macworld (06)**. Higher conversion probability (warm relationship), higher citation leverage per inclusion (Macworld's MagSafe roundup has the highest AI citation density in the cluster — 5.0 citations per AI answer when used).

TechRadar (05) is the second outreach. It's a cold pitch with significant upside but lower probability per pitch.

Targets

Outlet	Article	Status	Send
Macworld	"Best MagSafe Portable Battery Packs"	Warm — Simon Jary already reviewed TAU 2 + inCharge XL	First — within 7 days
TechRadar	"Best iPhone Chargers"	Cold — Harry Padoan, no prior contact	Second — within 14 days
CNET	"Best Power Bank for iPhone"	(Not in this kit — extension target)	Phase 2
Digital Camera World	"Best iPhone Power Bank"	(Not in this kit — extension target)	Phase 2
Tom's Guide	"Best MagSafe Chargers"	(Not in this kit — extension target)	Phase 2

Success metrics — 90 days

Metric	Baseline (29 Apr 2026)	90-day target
Inclusions in top-cited editorial articles	0 of 8	2 of 8
AI citations naming Rolling Square in cluster	0	≥ 1
Outreach response rate	n/a	30–50 %
Referral traffic from editorial domains	(current baseline)	+25 %
New journalist relationships (warm contacts)	4 (Jary, Hardy + 2)	6+

Re-run cluster monitoring monthly. If AI citations move from 0 $\rightarrow$ ≥ 1 within 90 days, the strategy is validated and scales to other clusters (cable management, tracker, travel adapter).

Asset gaps (to fill before sending)

- ☐ Convert markdown files to PDF (Pandoc / Marked / browser print).
- ☐ Fill in [Name] , [Role] , [Email] , [Phone] in both email templates with the actual signing PR contact.
- ☐ Verify journalist bylines on the live target pages — bylines change between guide refreshes.
- ☐ Confirm Simon Jary's current email format (Future plc / IDG variants).
- ☐ Add a Dropbox / Drive link to the brand fact sheet for the high-res photography library.
- ☐ (Optional but recommended) Build a parallel TAU 2 spec sheet matching 02–supertiny–spec-sheet.md for the Macworld pitch's two-pronged ask.

Editorial tone & non-negotiables

- ☒ **No paid placements.** This kit is designed for earned editorial only.
- ☒ **No embargo / no strings.** Review units go out unconditionally — editors decide whether to publish.
- ☒ **Lead with measurable claims,** never vague superlatives.
- ☒ **Always offer the comparison data.** Editors cite what they can verify; cite what they can paste.
- ☒ **Don't pitch a discount code or affiliate offer.** This is editorial outreach, not media buying.
- ☒ **Don't oversell awards.** Mention CES + Red Dot once. Twice is fine. Three times is suspicious.

After the first response

When an editor replies positively:

1. **Within 24 h:** ship review units (Supertiny + TAU 2 if applicable). Tracking number to the editor + PR team.
 2. **Within 48 h:** send the press kit PDFs + comparison infographic + a 2-line "ready quote" from a co-founder.
 3. **Within 1 week:** if they request additional data (charging speed tests on a specific device, thermal data, etc.), respond with the test results in a structured format.
 4. **Post-publication:** thank-you email + share the article on Rolling Square's social channels with @ mention. Builds the next pitch.
-

When to refresh this kit

- **Quarterly** — update test data, add new awards, update price points, refresh competitor specs.
 - **On product launch** — if Rolling Square ships a new charger, add it as a Pattern 6 in `04-brand-positioning-ai-optimized.md`.
 - **On Apple product release** — when iPhone 18 launches (or any new MacBook/iPad), update `02-supertiny-spec-sheet.md` with verified compatibility data and re-pitch.
 - **On competitor launch** — if Anker, UGREEN, or Belkin release a new sub-65 W class product, update `03-comparison-table.md`.
-

Companion clusters (next kits to build)

This iPhone Charger kit is the first of several. The same template extends to:

- **Cable management cluster** — pitch inCharge XL to cable management roundups.
- **Tracker cluster** — pitch AirCard Pro Dual to "best AirTag alternative" roundups.
- **Travel adapter cluster** — pitch Pocket Travel Adapter to international travel guides.
- **MagSafe accessory cluster** — pitch EDGE Pro to design-conscious tech publications.

Each follows the same 7-file structure as this one.
