

[PR] Outreach TechRadar — Harry Padoan (Supertiny review unit)

Assignee: Una **Priority:** Medium-High **Due:** within 14 days (after Macworld has responded, or 7 days if silent) **Tags:** pr-outreach , geo , iphone-charger-cluster , cold

Context

TechRadar is a **cold contact** for Rolling Square — no prior coverage. Their "Best iPhone Chargers" guide is the top-cited article in the category on TechRadar and carries strong "hands-on testing" signals that LLMs reward. The reviewer Harry Padoan states he's tested 25+ chargers, so he's receptive to review units from serious brands.

Goal: get the **Supertiny 65W** tested and included in the "best compact / travel charger" or "smallest 65W" slot. The article was last refreshed in November 2025 — next update likely Q1/Q2 2026.

Execution order: send this **AFTER** the Macworld task (warm). If Macworld has responded positively, cite it as social proof.

What to do before sending

1. **Verify the current byline** on <https://www.techradar.com/best/best-iphone-chargers> — TechRadar bylines change between refreshes. If it's no longer Harry Padoan, update the recipient.
 2. **Identify the product currently in the guide** in the "compact" or "travel" category — needed for line 2 of the email ("I noticed your guide currently features the [X]"). Shows you actually read it.
 3. **Find Harry Padoan's email** — Future plc pattern: harry.padoan@futurenet.com . Verify on Hunter.io if no response. LinkedIn → "Contact info" as backup.
 4. **Fill in the email signature.**

Email to send

To: harry.padoan@futurenet.com (verify before sending) **Cc:** [your PR tracking address] **Subject:** Review unit: Supertiny 65W GaN — smallest charger we've measured for your iPhone guide

Body (copy/paste as is):

ROLLINGSQUARE · PR Kit · April 2026

Hi Harry,

I came across your "Best iPhone Chargers" guide on TechRadar – the methodology of personally testing 25+ models is exactly the kind of hands-on benchmark that's hard to find in this category. I noticed the guide currently features the [INSERT COMPACT/TRAVEL PRODUCT NAME] in the compact category – wanted to put a similar-class option on your radar for the next refresh.

I work with Rolling Square, a Swiss accessory brand. Our Supertiny 65W USB-C GaN charger has a measurable size claim that I think is worth a slot in the guide:

- 45 mm tall, 70 g – roughly 22 % smaller by volume than the Anker Nano II 65W, and 67 % smaller than Apple's 70W adapter.
- Same 65W output. Full PD 3.0 + PPS. Hits iPhone 16's 28W max and sustains 57–60W under MacBook load.
- Foldable prongs, sold in US/UK/EU plug variants – the only 65W GaN we know of with regional plug interchangeability.
- Independent measurement by Charge-Test: 85.7–91.1 % efficiency.
- CES Innovation Award + Red Dot Design Award. Designed in Switzerland. \$49.99 retail.

Cult of Mac and Macworld have already independently reviewed the Supertiny – happy to share those for context.

If it fits the next refresh, I can send a US-plug review unit along with the Charge-Test report and a comparison spec sheet. No strings, no embargo – just a unit for your testing rig.

Best,
[FULL NAME]
[ROLE] · Rolling Square
[EMAIL] · [PHONE]

P.S. We also make a 2,000 mAh keyring power bank (TAU 2) that fits into the "emergency / never forget it" niche – happy to include one if it fits your power bank guide too. Macworld already reviewed it and called it "smaller than an AirPods case."

Attachments (3 files)

All ready in the `PR-Kit/iPhone-Charger/` folder:

#	File to attach	Path
1	Supertiny spec sheet	PR-Kit/iPhone-Charger/pdf/02-supertiny-spec-sheet.pdf
2	Comparison table	PR-Kit/iPhone-Charger/pdf/03-comparison-table.pdf
3	Size comparison infographic	PR-Kit/iPhone-Charger/assets/supertiny-size-comparison.jpg

Checklist (subtasks)

- ☐ Verify the current byline on <https://www.techradar.com/best/best-iphone-chargers>
- ☐ Identify the compact/travel product currently in the guide → insert it into line 2 of the email
- ☐ Verify Harry Padoan's email (Hunter.io or LinkedIn)
- ☐ Fill in signature with name, role, email, phone
- ☐ Attach the 3 PDF/JPG files from the PR-Kit folder
- ☐ Send the email from an official Rolling Square address
- ☐ Cc internal PR team for tracking
- ☐ Set follow-up reminder for Day +7
- ☐ Set follow-up reminder for Day +21 (LinkedIn DM)
- ☐ Log response/no-response in the CRM or PR tracking sheet

Follow-up cadence

Day	Action
0	Send email
+7	3-line bump with a fresh data point (e.g., "Just saw [competitor] add the Anker Prime 67W to their guide — happy to send the Supertiny for a side-by-side")
+21	Switch channel: LinkedIn DM or reply on a recent Twitter/X post
+60	If still silent, monitor mode — re-pitch when the guide gets a visible refresh

What to do if Harry replies positively

- Within 48h:** ship review unit (Supertiny US plug) with tracking.
- Within 48h:** send the full press kit + Charge-Test report PDF.

3. **If he asks for specific benchmark data** (e.g., test on iPhone 17 Pro Max, MacBook Pro 16"): coordinate with the product team and reply within 24h with structured data.
4. **Post-publication:** thank-you email + share on RS socials.

Success criteria (90 days)

-  Supertiny included in TechRadar's "Best iPhone Chargers" guide (compact/travel category)
-  At least one extractable claim for AI engines (e.g., "smallest 65W charger" with cited measurements)
-  Affiliate link to rollingsquare.com or Amazon in the article
-  Easier re-targeting: TechRadar's parent (Future plc) also includes T3, Tom's Guide, PC Gamer — opens the door for future pitches

Failure modes & responses

Harry's response	What to do
"Send it over"	Ship review unit within 48h, dual-tracked
"We don't accept review units from new brands"	Offer purchase + reimbursement as alternative
"Not a fit for the current lineup"	Ask if there's a different guide (travel chargers, GaN comparison) where it might fit
"We need a paid placement"	Decline — this kit is for earned editorial only
Silence after 60 days	Move on to CNET / Digital Camera World / T3 with the same kit
Email bounce	Find current writer on the live byline + retry

Key differences vs. the Macworld task

	Macworld	TechRadar
Relationship	Warm — already positive coverage	Cold — first contact
Conversion probability	High	Medium

	Macworld	TechRadar
Citation density if included	5.0 / AI answer (highest in cluster)	1.0 / AI answer
Email approach	Two-pronged ask + reference existing review	Single product, lead with measurements
Tone	Familiar, "always great to work with you"	Professional, no presumption
